

gameController::Action

```
classDiagram
    class GameControllerAction["gameController::Action"]
    class GameControllerMove["gameController::Move"]
    class GameControllerShot["gameController::Shot"]
    GameControllerMove --|> GameControllerAction
    GameControllerShot --|> GameControllerAction
```

The diagram illustrates a class hierarchy. At the top is the class 'gameController::Action'. Below it are two subclasses: 'gameController::Move' on the left and 'gameController::Shot' on the right. A horizontal line connects the two subclasses, with a vertical arrow pointing upwards from the center of this line to the 'gameController::Action' box. On the left side of the horizontal line, there are three vertical dots, indicating that there may be other subclasses not shown.

gameController::Move

gameController::Shot
